

ABSTRACT OF THE DISCLOSURE

A reservoir to reserve fluid for a vehicle comprises a tank and two brackets integrated with the tank to install the tank in the vehicle. An attaching portion is arranged with each of the brackets to be fixed to the vehicle. A connecting portion is arranged with each of the brackets to connect the attaching portion to the tank. One of the connecting portion has a notch that is deformed or fractured so that the tank can be moved for the vehicle to absorb force that acts to the tank when the tank receives force larger than a predetermined value. The attaching portion has plural rib portions that is deformed or fractured so that the tank can be moved for the vehicle to absorb force that acts to the tank when the tank receives a force larger than a predetermined value.
